                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by atandard recombinant methodology. The polypeptides can be used to inhibit cell prollferation associated with psoriasis or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligomucleotide probes are useful for in vivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which zcytor18 gene resides. The Zcytor18 polymucleotides can also be used in linkage-based testing of pulmonary alvoolar proteinosis, familial periodic fever and erythroleukemia, and erythroleukemia associated with polymorphisms of cytokine receptors. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TCGCAGCTGGCTGTGGCCGCTGGCGGGTCCGGCCGCGCGGGGGCGCCGACACCTGTGGC 120

The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with psoriaais or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligonucleotide probes are useful for invivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which Zcytor18 gene resides. The Zcytor18 polymocleotides can also be used in linkage-based testing of pulmonary alveolar proteinosis, familial periodic fever and erythroleukemia associated with polymorphisms of cytckine receptors. The present sequence represents a human Zcytor18 splice variant degenerate coding sequence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cytokine receptor polypeptide designated zcytor18, useful for inhibiting cell proliferation associated with psoriasis or tumor growth, and modulating immune system by binding to endogenous zcytor18 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytokine receptor; Zcytor18; cell proliferation; antipsoriatic; human; pulmonary alveolar proteinosis; familial periodic fever; antitumour; erythroleukemia; chromosome 3p14.3; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 ATGGCNCCNTGGYTNCARYTNTGYWSNGTNTTYTTYACNGTNAAYGCNTGYYTNAAYGGN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         59.6%; Score 88.8; DB 6; Length 2217; 53.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by catanated Zcytor18. The Zcytor18 polypeptides can be used to inhibit cell proliferation associated with psoriabis or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene charapy techniques. Zcytor18 eligonucleotide probes are useful for involved diagnosis, and the Zcytor18 probes and primers can be used to detect or vivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are and localize Zcytor18 gene expression in chromosome 3 in which zcytor18 gene resides. The Zcytor18 polymucleotides can also be used in linkage-based testing of pulmonary alveolar proteinosis, familial polymorphisms of cytokine receptors. The present sequence represents a murine Zcytor18 degenerate coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCGCAGCTGGCTGTGGCGGCTGGCGGGCCGCGGGGGGCGCCGACACCTGTGGC 120

The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polynucleotides encoding them receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens be used as an immunogen for the production of antisera or antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies apable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents human DCRS8 reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 TOGCAGCTGGCTGTGGCCGCTGGCGGGTCCGGCCGCGCGGGGCGCCCGACACCTGTGGC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention describes an isolated, purified or enriched nucleic acid (1) comprising: any of 4 fully defined sequences (SEQ. ID NO: 1, 6, 17 and 14their coding regions; a nucleic acid having at least 75% sequence identity to a nucleic acid of (a); or complements of (a) or The methods and compositions of the present invention are useful for synthesising lipopeptides, particularly A54145 and NRRL 3143, exhibiting antimicrobial, antifungal or antiviral activity. This sequence represents the Streptomyces refuinces 024A (or NRRL 3143) biosynthetic locus.
antimicrobial; fungicide; virucide; gene therapy; lipopeptide synthesis; AS4145; NRRL 3143; antimicrobial; antifungal; antiviral; biosynthetic locus; 024A; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful for synthesizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated, purified or enriched nucleic acid, useful for synthesizin
lipopeptides, particularly from the biosynthetic locus A54145 and NRRL
3143, that exhibits antimicrobial, antifungal or antiviral activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7696 redececacionercandececidades acceptodes de redececaciones de redecentos de redece

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated, purified or enriched nucleic acid (I) comprising; any of 4 fully defined sequences (SEQ. ID NO: 1, 6, 17 and 34), and their coding regions; a nucleic acid having at least 75% sequence identity to a nucleic acid of (a); or complements of (a) or The methods and compositions of the present invention are useful for Synthesising lipopeptides, particularly A54145 and NRLL 3143; exhibiting antimicrobial, antifungal or antiviral activity. This sequence represents ORF4 of the Streptomyces refuineus 024A (or NRRL 3143) biosynthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated, purified or enriched nucleic acid, useful for synthesizing lipopeptides, particularly from the biosynthetic locus A54145 and NRRL 3143, that exhibits antimicrobial, antifungal or antiviral activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61

The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding confideration or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or the proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of the which each of the strains is present in a culture or collection of strains; or (13) identifying the carget of a compound that inhibits the contribution of an organism. The antigens encoles acids are useful for proliferation of an organism. The antigense nucleic acids are useful for the proliferation of an organism. The engence or encoles of the arget of a compound collection of an organism. The antigense nucleic acids are useful for the proliferation of an organism. The antigense nucleic acids are useful for the proliferation of an organism. The antigense nucleic acids are useful for the proliferation of an organism and the control or and organism and antigense a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. acruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               78 CGCTGGCGGGTCCGGCCGCGCGCGGCCGACACCTGTGGCTGGAGGATGAAAGCGGC 137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antieense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zyskind JW;

Sequence 8317, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: US 0/074,788

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR PRILING DATE: 1998-02-18

PRIOR FILLING DATE: 1998-02-18

PRIOR PILLING DATE: 1998-07-27

SEQ ID NO 8317
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14222 AAGACGCCCGCCCAGGCCCCCCCCCCGGCGCGGCCAGGCCACCCCCACCGGGAAG 14281

with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedlings were incubated at 90% RH for 24 hr. Shoots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, 600000 pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close,

Phagemids were plated and picked at the Clean University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  http://www.genome.clemson.edu/projects/barley. /note="Vector: pBluescript II SK+; Site_I: EcoRI; Site_2:
XhoI; The cDNA library was constructed by Kellang Tang,
and Robert Cole at Washington University. CDNA was
synthesized from poly mRNA using an oligo-dr primer
containing a XhoI site. Following second strand synthesis,
EcoRI adapters were ligated to the CDNA, and products were
size-selected on sephacryl S500. The cDNA were
directionally cloned into the EcoRI/KhoI prepared
pBluescript II SK+ vector, and electroporated into GCI0
Competent Cells(PGC). The library may contain a small
percentage of host or bacterial contaminants."

/note="Vector: pBluescript II SK+Vector type: plasmid;
Site 1: EcoRI; Site 2: XhoI; The cDNA library was
constructed by Keliang Tang, and Robert Cole at Washington University. cDNA was synthesized from Poly(A) + mRNA using an oligo-d(T) primer containing a XhoI site. Following second strand synthesis, EcoRI adapters were ligated to the CDNA, and products were size-selected on sephacryl S500. The cDNA were directionally cloned into the EcoRI/XhoI prepared pBluescript II SK+ vector, and electroperated into ElectroTen Blue cells (Stratagene).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryotta, Alveolata, Apicomplexa, Coccidia, Eimeriida, Sarcocystidae, Neospora.

/clone lib="Nc-LIV Tachyzoite cDNA Library"
/note="Vector: pBluescript II SK+Vector type: plasmid;
Site 1: BcoRI, Site 2: Xho!; The cDNA Hibrary was
constructed by Keliang Tang, and Robert Cole at Washington
University. CDNA was synthesized from Poly(A) + mRNA using
an oligo-d(T) primer containing a XhoI site. Following
second strand synthesis, EcoRI adapters were ligated to
the cDNA, and products were size-selected on sephacryl
SSOO. The CDNA were directionally cloned into the
ECORI/XhoI prepared pBluescript II SK+ vector, and
electroporated into ElectroTen Blue cells (Stratagene).
The library may contain a small percentage of host or
bacterial contaminants."

The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with psoriasis or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligonucleotide probes are useful for in vivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which zcytor18 gene resides. The Zcytor18 polynucleotides can also be used in linkage-based testing of pulmonary alveolar proteinosis, familial

The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with psoriaais or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligomucleotide probes are useful for in vivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which linkage-based testing of pulmonary alveolar proteinosis, familial periodic fever and erythroleukemia, and erythroleukemia associated with polymorphisms of cytokine receptors. The present sequence represents a human Zcytor18 variant amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhbit cell proliferation associated with psoriasis or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 pixobes and primers can be used to detect and localize Zcytor18 probes and primers can be used to detect and localize Zcytor18 gross aberrations in chromosome 3 in which linkage-based testing of pulmonary alveolar proteinosis, familial periodic fever and erythroleukemia yaveolar proteinosis, familial polymorphisms of cytokine receptors. The prosess and numan Zcytor18 splice variant

The invention describes novel nucleic acids encoding interleukin (IL) 17
receptor like polypeptides useful as vaccines and in gene therapy. These
receptor like polypeptides useful as vaccines and in gene therapy. These
contemporation, anti-inflammatory, and optical, anti-inflammatory and optical activities. The IL-17 receptor like nucleic acids and proteins may be used to prevent and treat diseases associated with crampinal rejection), infections (e.g. inflammation, diabetes and transplant rejection), infections (e.g. hepatitis and septicaemia), weight disorders (e.g. anorexia, cachexia and obesity), neuronal dysfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy), lung disorders (e.g. anorexia, cachexia and obesity), neuronal dysfunction (e.g. anorexia, cachexia and obesity), neuronal dysfunction (e.g. anorexia, cachexia and obesity), neuronal dysfunction (e.g. anorexia, cachexia and mepilepsy), bone diseases (e.g. cystic fibrosis, asthma and emphysemal, skin disease (e.g. stroke and atherosclerosis, cancers (e.g. glaucoma and retinity and encett and miscarriage), eye disorders (e.g. glaucoma and retinity and tis complements may also used as diagnostic probes to detect and miscarriage), eye disorders (e.g. glaucoma and retinial murchater the presence of similar nucleic acids in samples and its complements may also used as diagnostic probes to detect and catherise seeding restorative therapy. The ILI7Tip may also be used as anti-infertion and activity. This is the main and activity. The anti-inference of the mman activity and section and activity. This is the main and activity. This is the main activity. The mine and explained expression and activity is the protein described in the method of the inference of the method of the inference of the method of
                                                                                                                                                                                                                                                                                                                                                                                                                              anti-inflammatory; anti-diabetic; immunosuppressive; anti-microbial; hepatic; anabolic; ancectic; anti-alzheimer's; anti-parkinsonian; anti-convulsant; anti-asthmatic; dermatological; renal; osteopathic; vascular; cytostatic; anti-leukaemic; anti-infertility; ophthalmological; hepatitis; anorexia; cachexia; neuronal dysfunction; lung disease; bone disease; vascular disorder; eye disorder; cancer; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.
                                                                                                                                                                                                                                                                                                                                                                                             Interleukin 17; hIL-17 receptor like protein; immunomodulatory;
                                                                                                                                                                                                                                                                                                              Human Interleukin 17 (hIL-17) receptor like protein.

The invention describes novel nucleic acids encoding interleukin (IL) 17 receptor like polypeptides useful as vaccines and in gene therapy. These have immunomodulatory, anti-inflammatory, anti-indiabetic, anti-inforcibial, immunomodulatory, anti-inflammatory, anti-indiabetic, anti-inforcibial, anti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological, osteopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and opticible may be used to prevent and treat diseases associated with inspropriate IL-17 receptor like polypeptide (IL17rlp) expression. These include, for example immune disorders (e.g. inflammation, diabetes and transplant rejection), infections (e.g. hepatitis and septicaemia), weight disorders (e.g. anorexia, cachexia and obesity), neuronal cysticic participates (e.g. anorexia, cachexia and obesity), neuronal cysticic fibrosis, asthma and emphysema), skin disease (e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis), obne diseases (e.g. osteoporosis, asthma and emphysema), skin disease (e.g. stroke and atherosclerosis, cancers (e.g. lung disorders (e.g. elacomia, myeloma and breast cancer), reproductive disorders (e.g. lung disorders (e.g. glamcoma and retinal neuropathy). The miscarriage), eye disorders (e.g. glamcoma and retinal neuropathy cynantiate the presence of similar nucleic acids in samples and identify modulators of expression and activity. The anti-cynantian in the production of antibodies against the proteins and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy neuropodies and antagonists may also be used to down regulate cynthy and protein seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes,
hepatitis; anorexia; cachexia; neuronal dysfunction; lung disease;
bone disease; vascular disorder; eye disorder; cancer; human; mutant;
                                                                                                                                                                                                      /label= Ser, Thr, Ala, Cys

receptor like polypeptides useful as vaccines and in gene therapy. These
receptor like polypeptides useful as vaccines and in gene therapy. These
conventional and the inflammatory, anti-diabetic, anti-alzheimer's, renal,
immunosuppressive, hepatic, anabolic, anorectic, anti-alzheimer's, renal,
anti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological,
costeopathic, vascular, cytostatic, anti-laukaemic, anti-infertility and
copthalmological activities. The IL-17 receptor like nucleic acids and
copthalmological activities. The IL-17 receptor like polypeptide (IL17TIp) expression. These
inappropriate IL-17 receptor like polypeptide (IL17TIp) expression. These
cinclude, for example immune disorders (e.g. inflammation, diabetes and
cransplant rejection), infections (e.g. hepatitis and septicaemia),
conclude, for example immune disorders (e.g. patients), neuronal
dysfunction (e.g. alzheimer's disease, Parkinson's disease and epilepsy),
clung disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease
(e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis),
bone diseases (e.g. osteoporosis and hypercalcemia), wascular disorders
(e.g. stroke and arberosclarosis, cancers (e.g. lukemia, myeloma and
breast cancer), reproductive disorders (e.g. lufertility and
considers (e.g. sproduction disorders (e.g. lufertility and
considers (e.g. sproduction of similar nucleic acids in samples and identify
complements mediang restorative therapy. The IL17Th may also be used as
cantigens in the production of antibodies against the proteins and
antigens in the production of antibodies against the proteins and
antigens in the production of antibodies against the proteins and activity. Note: This aguence of specification but is based on the human Interleukin 17 (IL-17) receptor
cyckersesion and activity. Note: This sequence is not given in the
cyckersesion and activity. Note: This sequence is not given in the
cyckersesion and activity.

The invention describes novel nucleic acids encoding interleukin (IL) 17

receptor like polypeptides useful as vaccines and in gene therapy. These

receptor like polypeptides useful as vaccines and in gene therapy. These

C mamunomodulatory, anti-inflammatory, anti-diabetic, anti-microbial,

immunosuppressive, hepatic, anabolic, anorectic, anti-alzheimar's, renal,

c anti-parkinsonian, anti-convulsant, anti-aleukaemic, dermatological,

osteopathic, vascular, cytostatic, anti-leukaemic, anti-infermility and

optobhablamological, activities. The IL-17 receptor like nucleic acids and

c proteins may be used to prevent and treat diseases associated with

c proteins may be used to prevent and treat diseases associated with

c proteins may be used to prevent and field [IL171p) expression. These

c include, for axample immune disorders (e.g. inflammation, diabetes and

c transplant rejection), infections (e.g. hepatitis and septicaemia),

c include, for axample immune disorders (e.g. papatitis and septicaemia),

c weight disorders (e.g. anorexia, cachexia and obesity), neuronal

c transplant rejection), infections (e.g. papatitis and septicaemia),

c dysfunction (e.g. Alzaheimer's disease, Parkinson's disease and

c dysfunction (e.g. Alzaheimer's disease, Parkinson's disease (e.g. glomerulonephritis),

c lung disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease

c stroke and atherosclerosis, cancers (e.g. glomerulonephritis),

bone diseases (e.g. cystic disorders (e.g. infertility and

c breast cancer), reproductive disorders (e.g. infertility and

c presence of similar nucleic acids in samples and identify

c patients needing restorative therapy. The IL17tlp may also be used as

c antigens in the production of antibodies against the proteins and anti-

c assays to identify modulators of expression and activity. The anti-

c assays to identify modulators of expression and activity. Note assays to identify modulators of expression and activity Note: This sequence is not given in the

                                                                                         receptor like polypeptides useful as vaccines and in gene therapy. These have immunomodulatory, anti-inflammatory, anti-diabetic, anti-microbial, anti-parkinsonian, anti-inflammatory, anti-diabetic, anti-microbial, anti-parkinsonian, anti-convulsant, anti-athmatic, anti-microbial, anti-parkinsonian, anti-convulsant, anti-leukaemic, anti-infertility and optical activities. The IL-17 receptor like nucleic acids and proteins may be used to prevent and treat diseases associated with inappropriate IL-17 receptor like polypeptide (ILI7TP) expression. These inappropriate IL-17 receptor like polypeptide (ILI7TP) expression. These include, for example immune disorders (e.g. inflammation, diabetes and transplant rejection), infections (e.g. hepatitis and septicaemia), weight disorders (e.g. anorexia, cachexia and obesity), neuronal dysfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy), dugfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy), tung disorders (e.g. cystic fibrosis, asthma and emphysemal, skin disease (e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis), bone diseases (e.g. osteoporosis and hypercalcaemia), vascular disorders (e.g. etroke and atheroselerosis, cancers (e.g. infertility and breast cancer), reproductive disorders (e.g. infertility and current presence of similar nucleic acids in samples and identify patients needing restorative therapy. The ILI7Tip may also be used as antigens in the production of antibodies against the proteins and in cultivity. Modulators of expression and activity. Note: This sequence is not given in the expression and activity. Note: This sequence is not given in the expression and activity. Note: This sequence is not given in the production of the human interlement in the human interpetable of the human interpetable 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LPRERLRPRPKVFLCYSSKDGQNHMNVVQCFAYFLQDFCGCEVALDLWEDFSLCREGQRE 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes novel nucleic acids encoding interleukin (IL) 17 receptor like polypeptides useful as vaccines and in gene therapy. These have immunomodulatory, anti-inflammatory, anti-diabetic, anti-microbial, immunosuppressive, hepatic, anabolic, anorectic, anti-alzhaimer's, renal, anti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological, asteopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and ophthalmological activities. The IL-17 receptor like nucleic acids and proteins may be used to prevent and treat diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.

Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.

Claim 24; Page; 158pp; English.

The invention describes novel nucleic acids encoding interleukin (IL) 17

receptor like polypeptides useful as vaccines and in gene therapy. These
have immunomodulatory, anti-inflammatory, anti-diabetic, anti-microbial,
immunosuppressive, hepatic, anabolic, anorectic, anti-latheimer's, renal,
continuous anti-convulsant, anti-sethmatic, dermatological,
anti-parkinsonian, anti-convulsant, anti-leukaemic, anti-infertility and
costeopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
costeopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
coptinal mological activities. The IL-17 receptor like nucleic acids and
coptinal may be used to prevent and treat diseases associated with
controlled, for example immune disorders (e.g. inflammation, diabetes and
controlled, for example immune disorders (e.g. inflammation, diabetes and
controlled, for example immune disorders (e.g. inflammation, diabetes and
controlled, for example immune disorders (e.g. inflammation, diabetes and
controlled, for example immune disorders (e.g. cystic fibrosis, asthma and cophysema),
controlled, for example immune disorders (e.g. cystic fibrosis, asthma and emphysema),
controlled, for example immune disorders (e.g. stroke and atherosclerosis, cancers (e.g. leukemia, myeloma and
controlled, for example immune disorders (e.g. infertility and
controlled), reproductive disorders (e.g. infertility and
controlled), reproductive disorders (e.g. infertility and

miscarriage), eye disorders (e.g. glaucoma and retinal neuropathy). The DNA and its complements may also used as diagnostic probes to detect and quantitate the presence of similar nucleic acids in samples and identify patients needing restorative therapy. The ILI/Thp may also be used as antigens in the production of antibodies against the proteins and in assays to identify modulators of expression and activity. The anti-ILI/Thp antibodies and antagonists may also be used to down regulate expression and activity. Note: This sequence is not given in the specification but is based on the human Interleukin 17 (IL-17) receptor like protein sequence (AAU09904) and has been created according to

```

Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.

WPI; 2001-611392/70.

Claim 22; Page; 158pp; English.

The invention describes novel nucleic acids encoding interleukin (IL) 17

receptor like polypeptides useful as vaccines and in gene therapy. These

creceptor like polypeptides useful as vaccines and in gene therapy. These

contemporate inflammatory, anti-alabeimer's, renal,

immunosuppressive, hepatic, anabolic, anorectic, anti-alabeimer's, renal,

anti-parkinsonian, anti-convulsant, anti-alabeimer's, renal,

costeopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and

opticins may be used to prevent and treat diseases associated with

copticins may be used to prevent and treat diseases associated with

inappropriate IL-17 receptor like polypeptide (IL17Th) expression. These

cransplant rejection), infections (e.g. hepatitis and septicaemia),

weight disorders (e.g. alorexia, cachexia and obesity), neuronal

dysfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy),

cup disorders (e.g. anorexia, cachexia and obesity), neuronal

dysfunction (e.g. alzheimer's disease, Parkinson's disease and epilepsy),

cup disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease

(e.g. stroke and therosclerosis, and hypercalcaemia), wascular disorders

(e.g. stroke and atherosclerosis, and retinal neuropathy). The

miscarriage), reproductive disorders (e.g. leukemia, myeloma and

breast cancer), reproductive disorders (e.g. leukemia, and its complements may also used as diagnostic probes to detect and

cynticians in the production of sntibodies as against the proteins and in

assays to identify modulators of expression and activity. The anti
cyntry antipodies and antagonists may also be used as controlled assays to identify modulators of expression and activity. Note: This sequence is not given in the

cyntrication but is based on the human Interleukin 17 (IL-17) receptor

like protein sequence (AMU09904) and has been created according to
